

# **NETTOBESERVICES** -The Zoho People

**Technology that works for your business.**

---

**Your digital transformation begins today - Nettobe Services  
powers every organisation with modern technology and  
trusted expertise.**

**[www.net2be.net](http://www.net2be.net)**

**NOTES**

# Run IT better. Run the business smarter.

---

## ManageEngine

### **ServiceDesk / Support Center Plus - ITSM/AM**

Structure requests, workflows, self-service and change management.

### **Endpoint central and OpManager Plus - ITOM**

Monitor networks, servers and applications with proactive visibility.

### **Log360 and Ad360 - SIEM**

Centralise logs, detect threats and support compliance reporting.

## Who We Work With

We work with government teams, banks, and enterprise companies that cannot afford messy IT operations, weak visibility, or slow incident response.

For these organisations, IT is not just support. It is the backbone of daily operations, customer service, compliance, security, and business continuity. ManageEngine helps bring structure across service management, infrastructure monitoring, and security operations, so teams can detect issues faster, respond with confidence, and keep critical systems running with less noise.

**ManageEngine**  
a division of Zoho Corp.

# Going deeper into ManageEngine

---

**ManageEngine's ServiceDesk Plus** helps IT teams manage daily service delivery in a structured way. It brings **incidents, service requests, approvals, SLAs, changes, problems, assets, and self-service** into one platform, so users know where to ask for help and IT teams can track, prioritise, and resolve work properly. It also helps management see what is happening across the service desk: **response times, recurring issues, workload, user satisfaction, and operational bottlenecks.**

**ManageEngine's ITOM** combines OpManager and Endpoint Central to give IT teams **visibility** across infrastructure and control over endpoints. **OpManager monitors networks, servers, applications, bandwidth, and device health**, helping teams spot performance issues early. Endpoint Central adds **patch management, vulnerability management, malware protection, MDM, application control, software deployment, configuration management, remote access, and asset discovery**, so organisations reduce downtime and keep services running properly with stronger daily operational discipline.

**ManageEngine's SIEM** combines Log360 and AD360 to improve security monitoring and response. Log360 centralises **log management, threat detection, user behaviour analytics, event correlation, compliance reporting, and investigation across on-prem, cloud, and network systems.** AD360 adds **identity and access management with Active Directory auditing, user provisioning, password management, and privileged access control.** Together, they help teams detect threats faster, reduce manual work, simplify audits, and strengthen security across users and systems.

### Zoho Business Applications

We are one of the strongest Zoho partners in the game because we do more than sell licences. We understand how businesses actually work, then shape Zoho around their sales, finance, HR, operations, support, and management needs.

Nettobe also builds its own business apps on top of the Zoho ecosystem, including *E-invoicing* and payroll systems. This means clients get the best of both worlds: proven Zoho applications, plus local solutions designed around real operational requirements.

# E-INVOICING AS IMPLEMENTED BY MRA

**One time pre-requisite:** Seller configures and registers EBS for e-Invoicing with MRA

## ZOHO E-INVOICING

# Nettobe Payroll

## Payroll + Workforce Intelligence

---

### **PAYROLL MANAGEABILITY**

Manage monthly payroll through a clear, controlled process covering employee earnings, allowances, overtime, deductions, statutory contributions, approvals, payslips and payroll reporting.

### **WORKFORCE INTELLIGENCE**

Gain a clearer view of employee cost, productive hours, utilisation, absence impact and payroll trends. Giving management better insight into workforce performance and financial exposure.

**Returns CSG/PAYE/PRGF**

**Mauritius statutory compliance**

**Automated payslips and reports**

**Leave and workforce cost insights**

**Bureau feature**

# See risk before it becomes an incident.

---

## UAM

### USER ACTIVITY MONITORING

Gain visibility across on-site, remote and hybrid teams while protecting productivity and sensitive information.

## IRM

### INSIDER RISK MANAGEMENT

Understand workforce behaviour, identify unusual activity and investigate risk with better context.

User activity visibility

Behaviour analytics

Insider-risk detection

Productivity insight

Investigation and compliance support

# (Veriato)

INSURSA + NETCONSENT + RARITAN

## Special technology for Special Problems.

---

**Intelligence** turns historical insurance data into predictive insight and guided decisions. **Connect** creates a governed data repository supporting validation, underwriting, claims efficiency and fraud prevention.

Make policies, training and communications visible, enforceable and provable. Content Manager, Assessor, Informer and Reporter support acknowledgement, surveys, alerts and audit evidence.

Build reliable, manageable data-centre infrastructure with intelligent rack PDUs, environmental and rack monitoring, and secure KVM-over-IP remote access.

FROM IDEA TO VALUE

# From first conversation to lasting value.

---

1

## **Discover the business need**

Understand the problem, priorities, users and desired outcome.

2

## **Test through a proof of concept**

Validate fit and value before making a larger commitment.

3

## **Go through a proper requirement gathering**

Understanding painpoints capabilities , risks and making a match to the solution

4

## **Implement, configure and train**

Prepare the solution and the people who will use it.

5

## **Support, manage and improve**

Keep the technology useful as requirements and risks evolve.

## More than software.

---

- + More than 20 years of technology experience**
- + Practical local and regional expertise**
- + Proof of concept before commitment and the best requirement gathering in the game**
- + Professional implementation and training**
- + Ongoing support and managed services**
